

Platelet Pills for Dengue Patients

By Express News Service

KOCHI: Bangalore based Micro Labs has launched Caripill, which helps to increase platelet counts in patients suffering from Dengue. The pill is made from Carica Papaya leaf extract and does not have any side-effects, the company claimed.

“ With surge in dengue cases in India, there is huge demand for platelets as platelet transfusion was the only option available so far. Now with the launch of Caripill, which helps to increase the platelet counts in dengue patients.

“The initial reports have been satisfactory and we hope this will be major revolution in dengue management,” said Dilip Surana, Managing Director, Micro Labs.
